**(XX City) DEPLOYS CSP TO COMBAT URBAN VIOLENT CRIME**

Technology To Be Used To Help Decrease Violent Crime

**CITY, State.** – XX XX, 2017 – Today **XX City** announced that it is deploying the Community Support Program technology to help decrease violent crime city-wide. The CSP uses real-time motion imagery to provide impartial investigative information in response to calls for service to respond faster and more safely to a crime scene, confirm witness testimony, and locate suspects. The overall goal of the Community Support Program is to improve trust and accountability between law enforcement and community while reducing violent crime.

**Insert: quote from police chief, Mayor, or city council representative here**

The **<name of agency>** Police Department and the City Council of **<name of city>** are committed to making **<name of city>** a better, safer place to live. Our goal is to create an environment where trust and accountability can prosper and make communities a more enjoyable place to live.

Using technology provided by PSS, the CSP supports communities by analyzing available imagery to help solve and deter violent crime city-wide. Once a call for service is received, the imagery can be reviewed by analysts who can provide first responders with real-time information on the location of the crime and suspects coming and going from the scene. This allows for informed decisions and faster emergency response while also improving situational intelligence and increasing first responder safety. CSP data also enables law enforcement agencies to confirm witness statements, increase case closure, and improve overall police effectiveness.

More information on the CSP is available at [www.communitysupport.info](http://www.communitysupport.info)
